This book is a scary and fascinating look at the future of the United States as imagined by Albert Brooks. Set in the year 2030, we find that the United States has not dealt with its debt problem. Cancer has been cured, people can take a pill to 'cure' obesity and the physical effects of aging have been drastically reduced.

The story follows a diverse cast of characters in the year 2030, by which (hypothetical) time cancer will have been cured; generational tension between the young and the old will have escalated, and; a "half-Jewish" president of the United States will have been elected (hamstrung by massive federal debt) also will be challenged by:

For decades Mr. Brooks has entertained the world with intelligent thought-provoking satire through television and film. The bright-colored cover belies a disheartening story. The first half of '2030' was interesting in his extrapolations of what might occur not far down the road. Many of the issues revolving around healthcare and the waning power of the United States seem plausible. However, the story was delivered in a bland manner. "With 2030 Mr. Brooks has made the nery move of transposing his worrywart sensibility from film to book. Two things are immediately apparent about his debut novel: that it's as purposeful as it is funny, and that Mr. Brooks has immersed himself deeply in its creation."--

That sounds like good news, but consider this: millions of baby boomers, with a big natural predator picked off, were sucking dry benefits and resources that were never meant to hold them into their eighties and beyond. Young people around the country simmered with resentment toward "the olds" and anger at ...
