The Logic of Failure: Why Things Go Wrong and What We Can Do to Make Them Right or Recognizing and Avoiding Error in Complex Situations by Dietrich Dörner This psychologist could have written Systemantics. His subjects in the main cannot cope with simple feedback systems. Given a computer simulation of a freezer, most subjects could not manually regulate the temperature of the freezer. These reactionary boobs continually over shot the target temperature so often that they resorted to the ...

Our mind has a tremendous ability to extrapolate and interpolate in the physical domain. For example, if we see only a small portion of a tiger slinking behind some shrubbery, we can quickly evaluate the situation and take action to ensure our survival. On the other hand, we deal relatively poorly with time sequences. Dörner writes that:

Herr Dörner gives us an important book that provides insights into human shortcomings in recognizing and dealing with complex situations. It's not that we're not smart, but our cognitive processes are in turn, petulant, impatient, and lazy. Happily, Dörner provides some assistance in meeting the challenge of complex situations; so, this volume has both theoretical and practical ...
